

Lisp

Christian Queinnec

Preface

Part 1 First Steps in LISP

Chapter 1 LISP Data

- 1.1 Atoms and Lists
- 1.2 Primitive Handling Functions
 - 1.2.1 Definition of *First*
 - 1.2.2 Definition of *Rest*
 - 1.2.3 Definition of *Insert*
 - 1.2.4 Definition of *Atom*
 - 1.2.5 Definition of *Null*
 - 1.2.6 Definition of *Eq*
- 1.3 The LISP Language
 - 1.3.1 Program and data identification
 - 1.3.2 Logic values
 - 1.3.3 The empty list
- 1.4 Historical Background
- 1.5 Exercises

Chapter 2 First Steps in LISP

- 2.1 Exercises

Chapter 3 Micro-manual

- 3.1 Basic Functions
- 3.2 Exercises
- 3.3 Dealing with Numbers in LISP
- 3.4 Exercises
- 3.5 Input/Output
- 3.6 Exercises
- 3.7 Functions
 - 3.7.1 Different types of function
 - 3.7.2 Environment
 - 3.7.3 Evaluation of an EXPR form
 - 3.7.4 Conclusions

3.8 Exercises

Part 2 Programming (Well) in LISP

Chapter 4 Unsophisticated Style

4.1 Exercises

Chapter 5 Buffer Variables

5.1 Exercises

Chapter 6 Data Driven Programming

6.1 Exercises

Chapter 7 Instantiation of Schemas

7.1 Exercises

Chapter 8 Inside LISP

8.1 Exercises

Chapter 9 Putting LISP into Practice

9.1 Exercises

Chapter 10 A Software Robot

10.1 General Concepts

10.2 Utility and Complementary Functions

10.3 Pattern Matching

10.4 Natural Language Interface

10.5 Database Administration

10.6 The Sequencing of Dialogues

10.7 List of Rules

10.8 Conclusions

Chapter 11 Epilogue

Chapter 12 Solutions to the Suggested Exercises

Chapter 13 Appendix: LISP in LISP

Chapter 14 Bibliography

Chapter 15 Index of Quoted Functions
