

The Schematics of Computation

Vincent S. Manis and James J. Little

Preface

To The Student

Acknowledgements

How to Get the Software Package

Chapter 1 Computers, Programs, and Scheme

1.1 Setting the Stage

1.2 Scheme

1.3 Procedures and Definitions

1.4 Decisions

1.5 The Rules (Version 2)

Summary, Further Readings, Key Words

Problems, Self-Assessment, Programming Problems

Chapter 2 Recursion

2.1 Recursive Procedures

2.2 Designing Recursive Procedures

2.3 Measuring the Cost of a Computation

2.4 Designing, Testing, and Debugging

Summary, Further Readings, Key Words

Problems, Self-Assessment, Programming Problems

Chapter 3 Building Programs

3.1 Text Processing

3.2 Input/Output and Graphics

3.3 Procedures as Arguments

3.4 Program Organization: Variables, Values and Interfaces

Summary, Further Readings, Key Words

Problems, Self-Assessment, Programming Problems

Chapter 4 Structures and Collections

4.1 Structures

4.2 Quote and Symbols

4.3 Collections

4.4 Mapping, Filtering, and Reduction

Summary, Further Readings, Key Words

Problems, Self-Assessment, Programming Problems

Chapter 5 Mutation and State

5.1 Balances and Boxes

5.2 Mutating Data Structures

5.3 Variables that Vary

5.4 From Substitution to Environments

5.5 Definitions and modules

Summary, Further Readings, Key Words

Problems, Self-Assessment, Programming Problems

Chapter 6 Object-Oriented Programming

6.1 A World of Objects

6.2 Implementing Classes with Procedures

6.3 Object-oriented Design

Summary, Further Readings, Key Words

Problems, Self-Assessment, Programming Problems

Chapter 7 Evaluators and Languages

7.1 Programming Languages

7.2 Trees

7.3 Interpreters and Compilers

7.4 Extending Scheme

7.5 A Scheme Evaluator

Summary, Further Readings, Key Words

Problems, Self-Assessment, Programming Problems

Chapter 8 Databases

8.1 Tables and the Relational Model

8.2 A Database Language for Scheme

8.3 Implementing DBScheme

8.4 Designing a Database

Summary, Further Readings, Key Words

Problems, Self-Assessment, Programming Problems

Chapter 9 Data Structures and Algorithms

9.1 Complexity Revisited

9.2 Searching

9.3 Sorting

9.4 Time-Ordered Structures

9.5 A Graphics Language

Summary, Further Readings, Key Words

Problems, Self-Assessment, Programming Problems

Chapter 10 Facts and Rules

10.1 Patterns and Rules

10.2 A Driving Consultant

10.3 Logic and Logic Programming

10.4 Logic Languages and Evaluators

Summary, Further Readings, Key Words

Problems, Self-Assessment, Programming Problems

Chapter 11 Gleam, the Ghost in the Machine

11.1 Representing Data

11.2 The Gleam Computer

11.3 Programming in `gap`

11.4 Implementing Gleam

11.5 Implementing Graphics on Gleam

Summary, Further Readings, Key Words

Problems, Self-Assessment, Programming Problems

Chapter 12 Virtual Machines

12.1 Gleam/2

12.2 The Gleam Virtual Machine

12.3 The Imperative Evaluator

12.4 Operating Systems

Summary, Further Readings, Key Words

Problems, Self-Assessment, Programming Problems

Coda

Appendix A Answers

Appendix B Scheme Reference Summary

B.1 Lexical Rules

B.2 Scheme Values and Their Types

B.3 External Representations of Scheme Values

B.4 Variables and Scope

B.5 Basic Forms

B.6 Primitives

Appendix C Gleam Reference Manual

C.1 Address Calculation

C.2 Gleam Memory Access Instructions

C.3 Gleam Register Instructions

C.4 Gleam/2 Instructions

C.5 Gleam Assembly Language: `gap`

Bibliography

Glossary

Index
